

HOW TO RUN SEAMARKS ON MAC COMPUTERS

This is the procedure to install SeaMarks into a MAC running Yosemite via Crossover 15.0.1. This program is available from Cocoweavers.com for \$60. You can get a 15 day free trial version to verify you want to go this way.

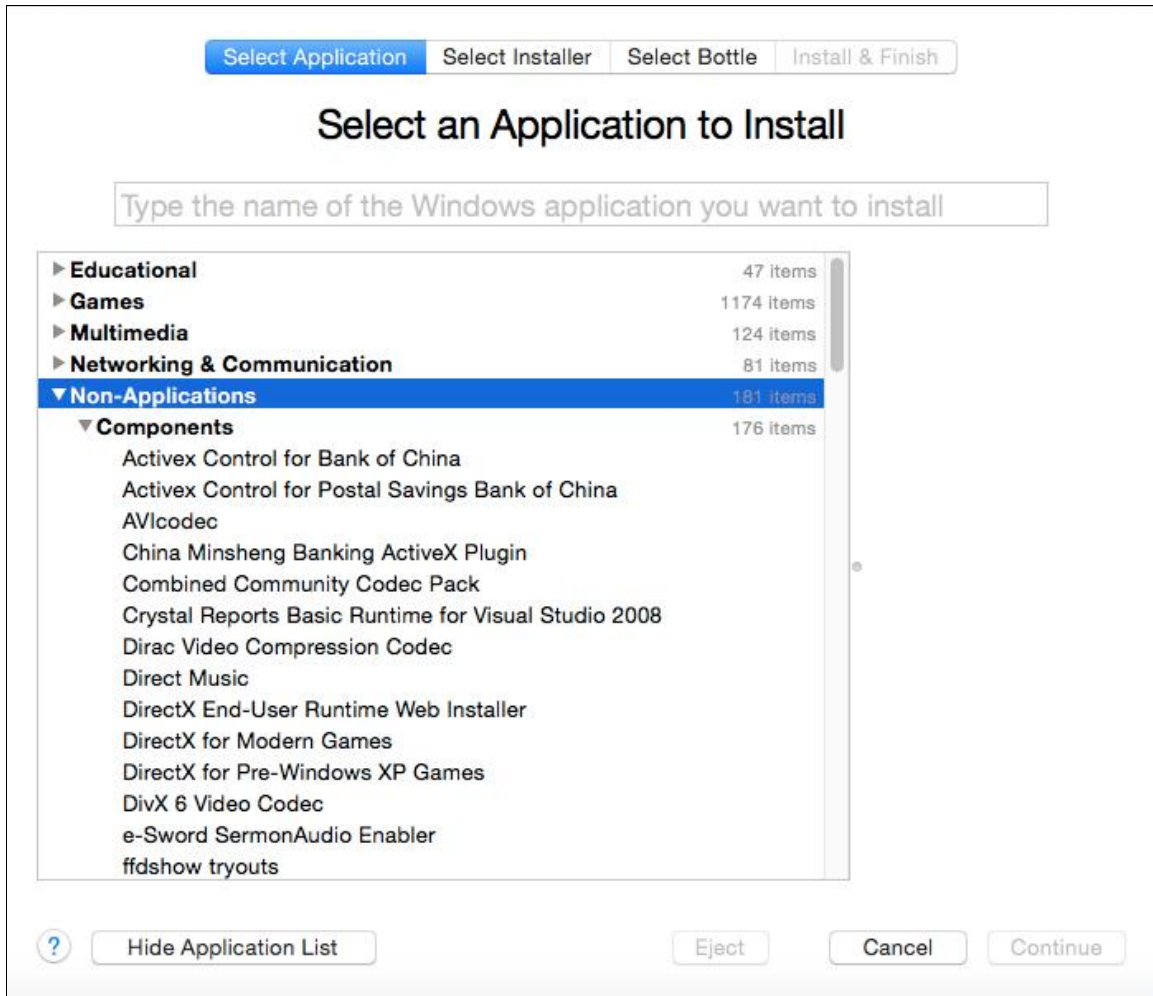

Note: Codeweavers continues to upgrade Crossover, so some of this might change, but the basic scheme will be the same. Basically, you will be setting up a virtual container called a bottle into which you will put two apps. They are a Visual Basic runtime library and the SeaMarks program.

Install and run Crossover.

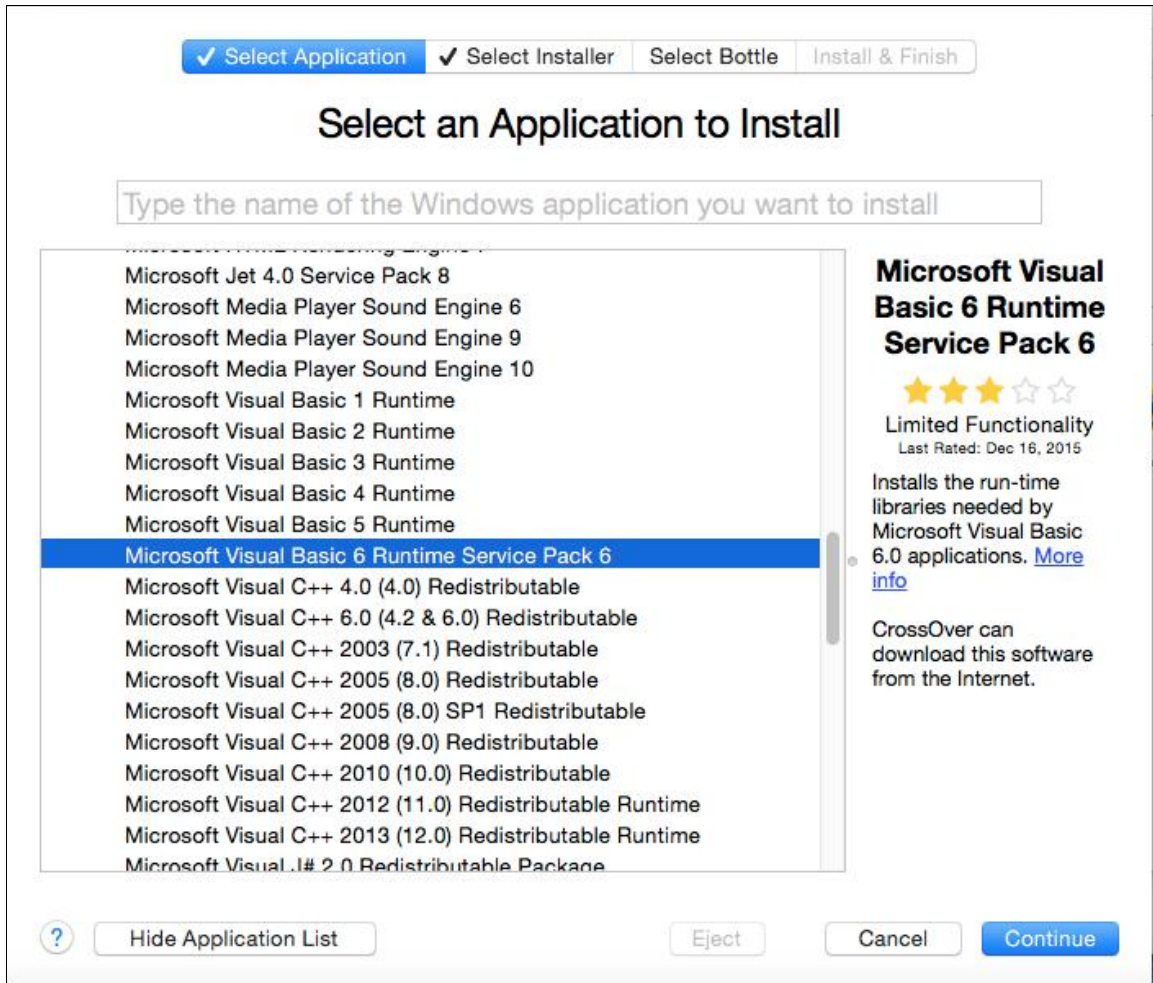

Click "Install a Windows Application" . You will get the following set of screens. On this one push Browse All Applications at the bottom left corner of the screen.

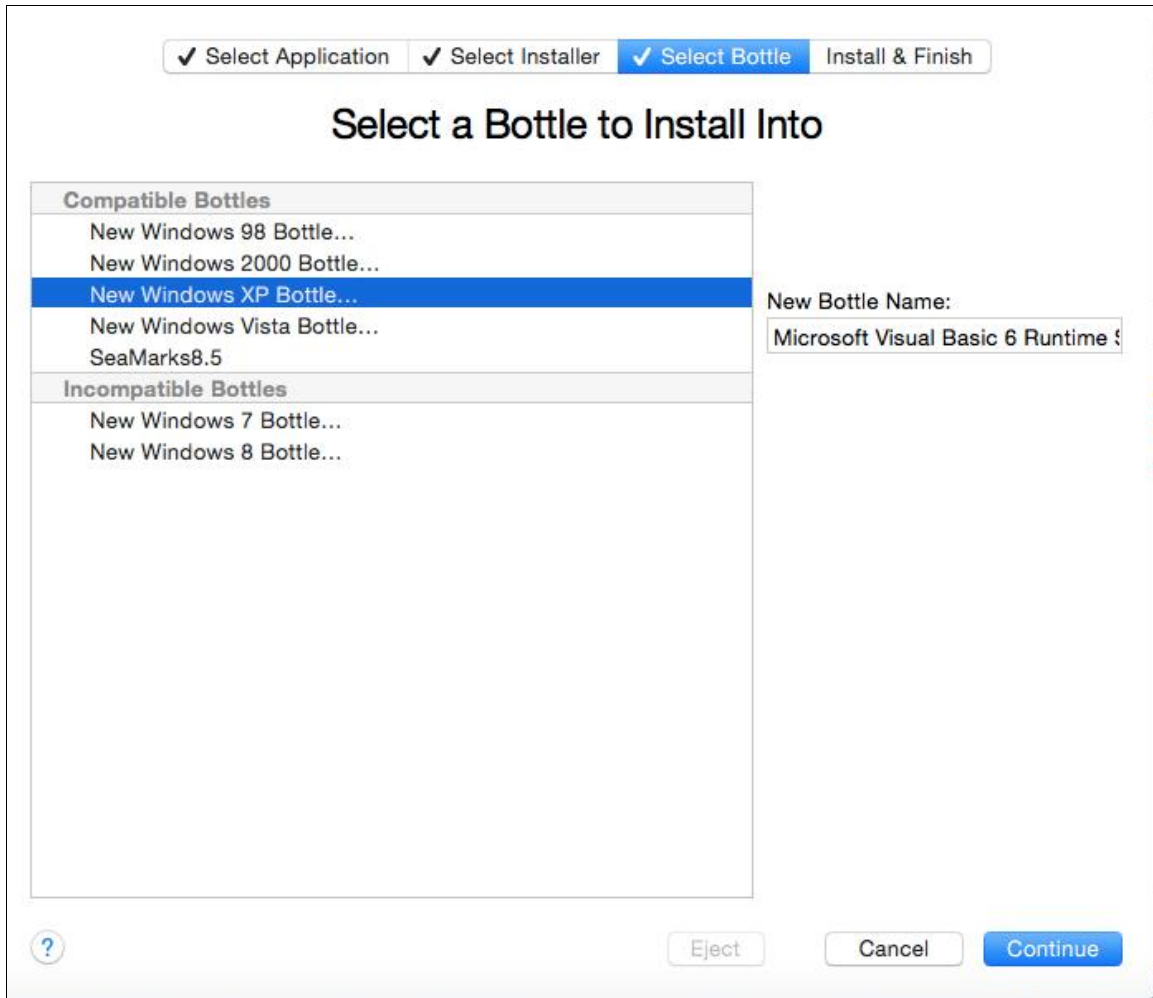

Under "Select an application to install", Select Non- Applications>Components (expand the selection) .

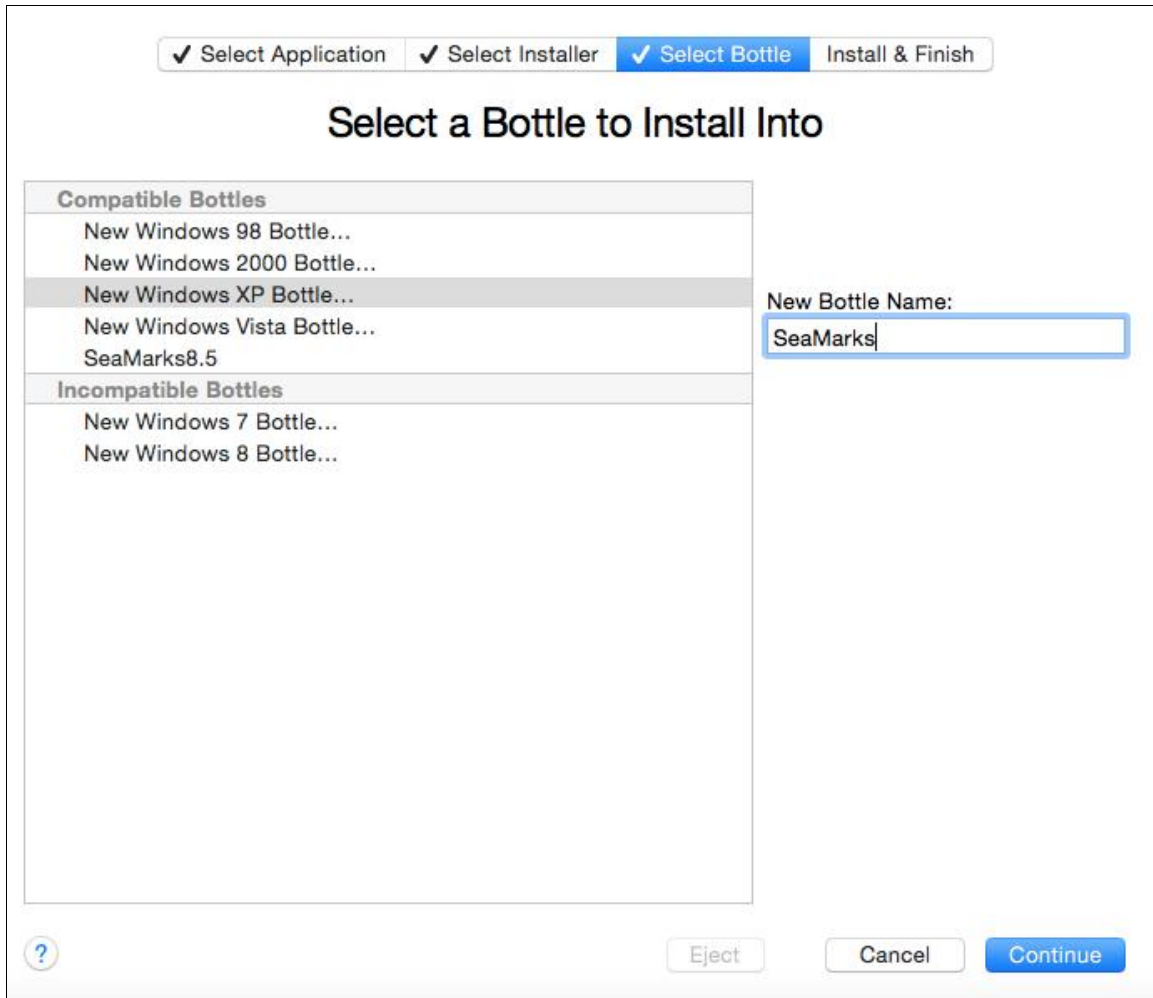

Scroll down to "Microsoft Visual Basic 6 Runtime Service Pack 6", and select it. Do not push the Continue button yet. Instead push Select Bottle

Select a New Windows XP Bottle.

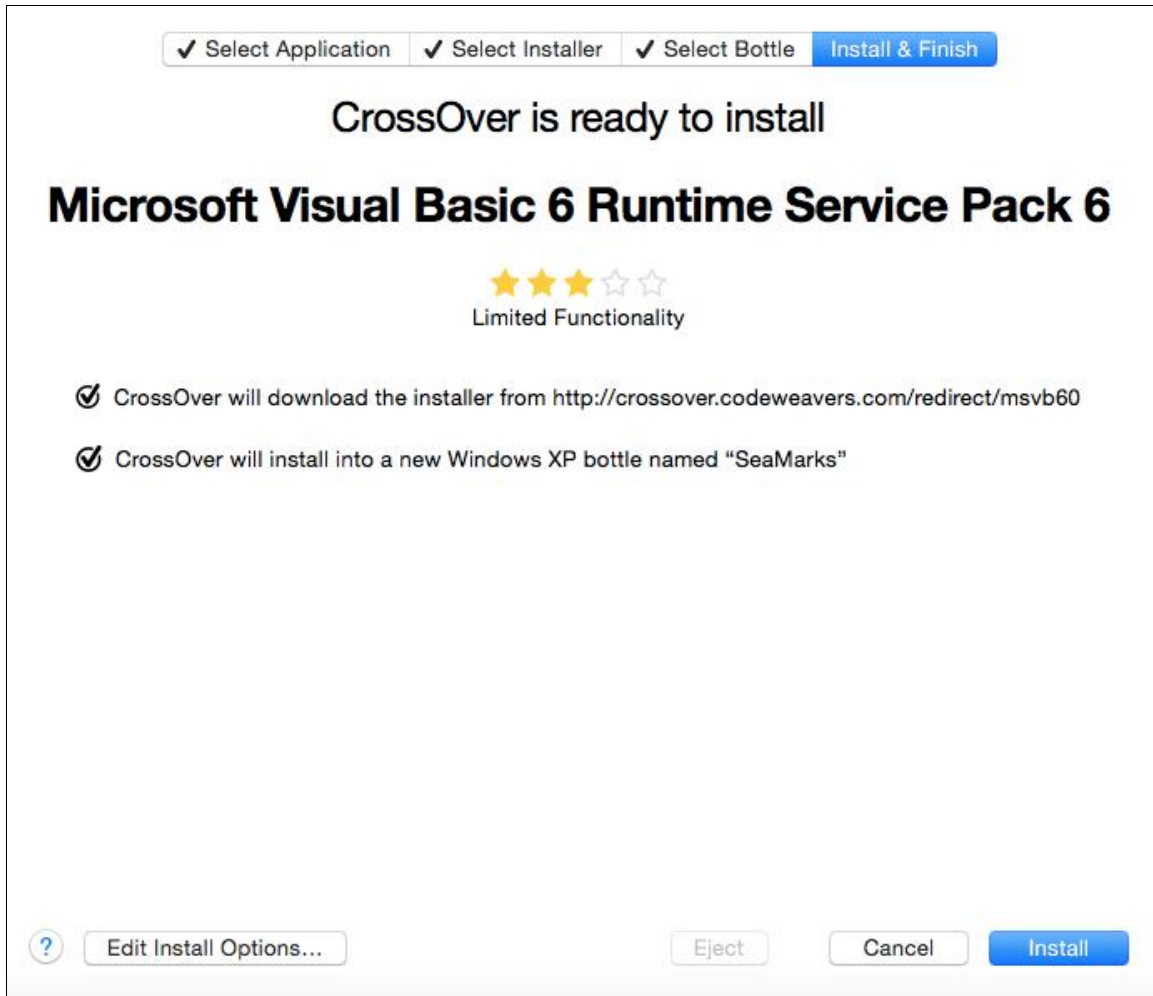

Set the New Bottle name to "SeaMarks"

Now push Continue

Note: Crossover is based on a previous software called Wine. So when it talks of a bottle, it means a container to hold the Windows software you will be installing.

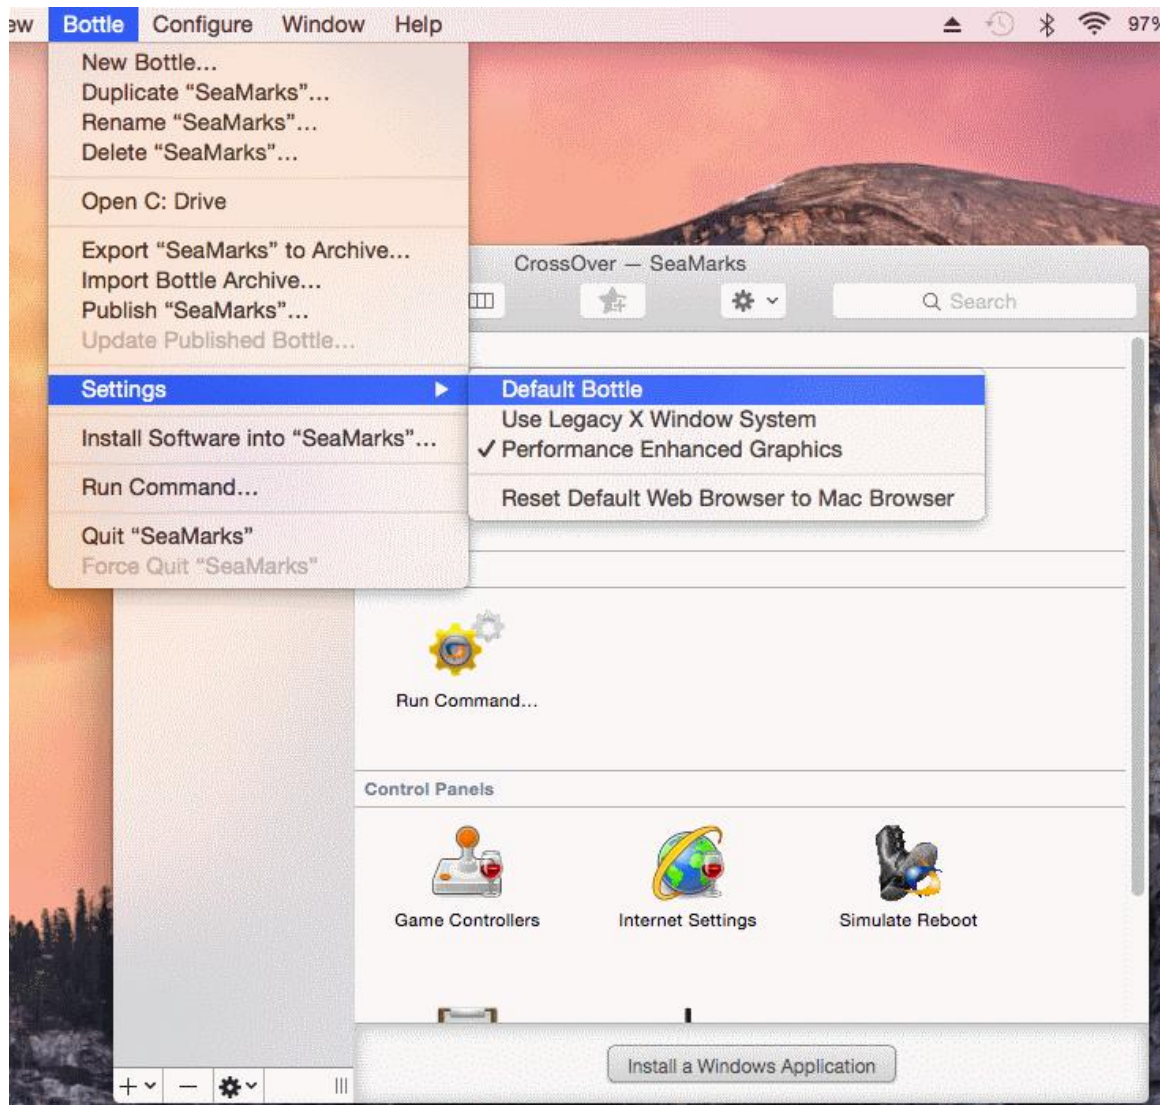

Now, you are ready to install the necessary component into the SeaMarks bottle that will also hold the SeaMarks program.

Then push Install.

That runs for a minute or two and then asks for approval of the license. Push Yes and then Done.

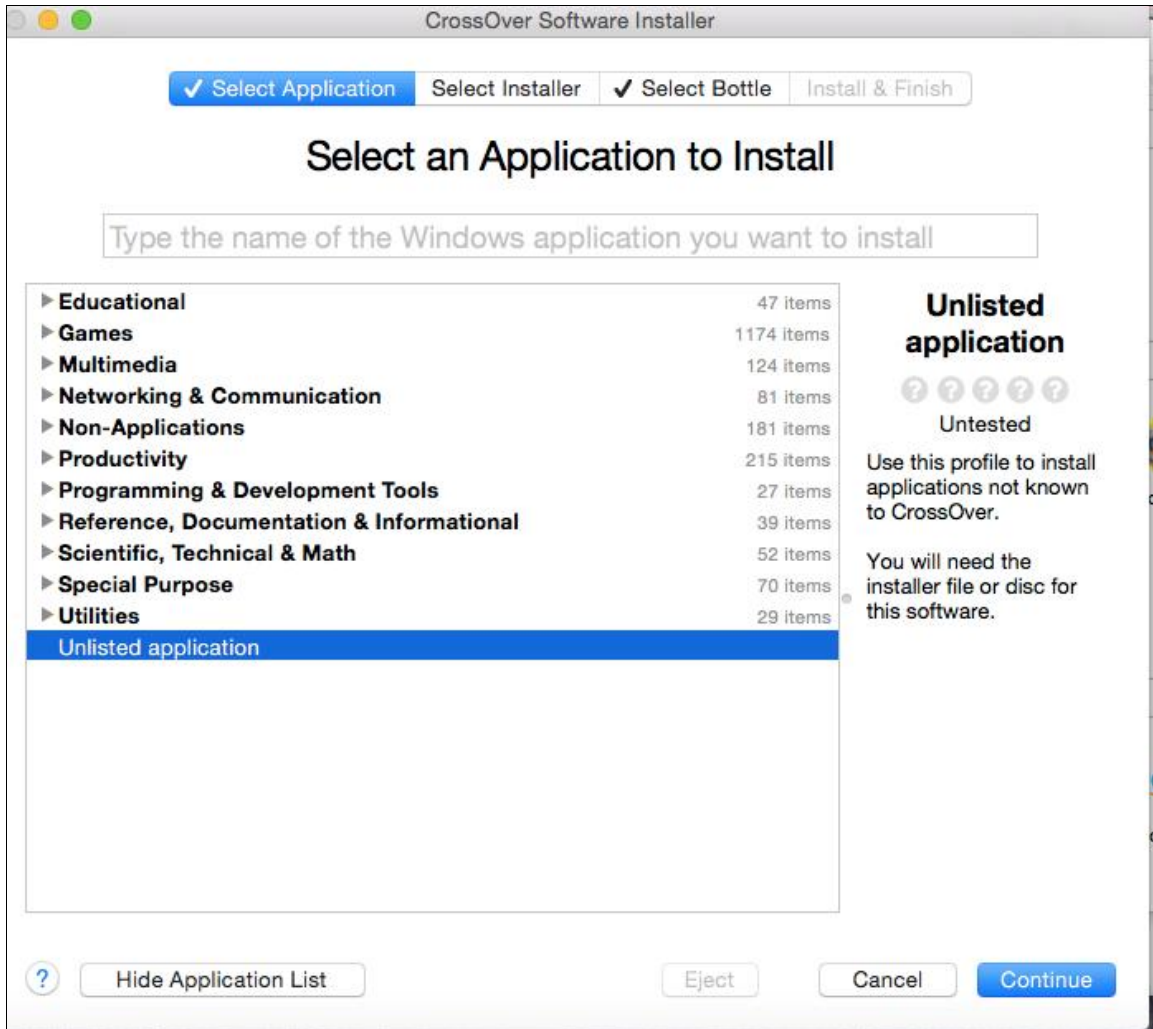

Now, select the SeaMarks bottle and go to the top menu item "Bottle" and sub menu "Settings" and click sub-sub menu item: "**Use legacy Windows X window system**"

Then click 'Reboot bottle and enable X Windows system' when it asks.

Now, select "**Install a Windows application**" again with the SeaMarks bottle selected.

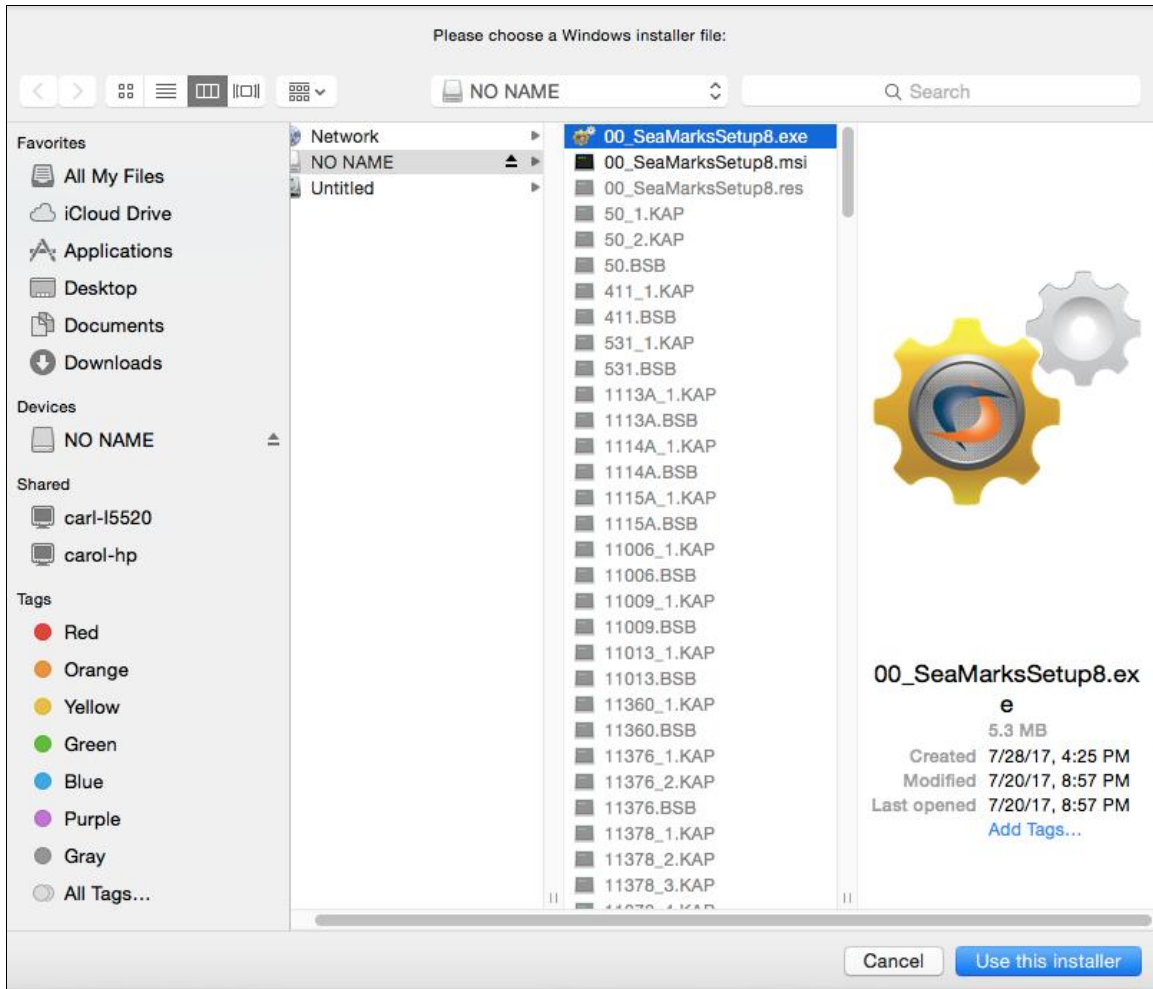

Under 'Select an application to install', click the Browse All Applications and scroll down and pick "**Unlisted Application**" under Utilities"

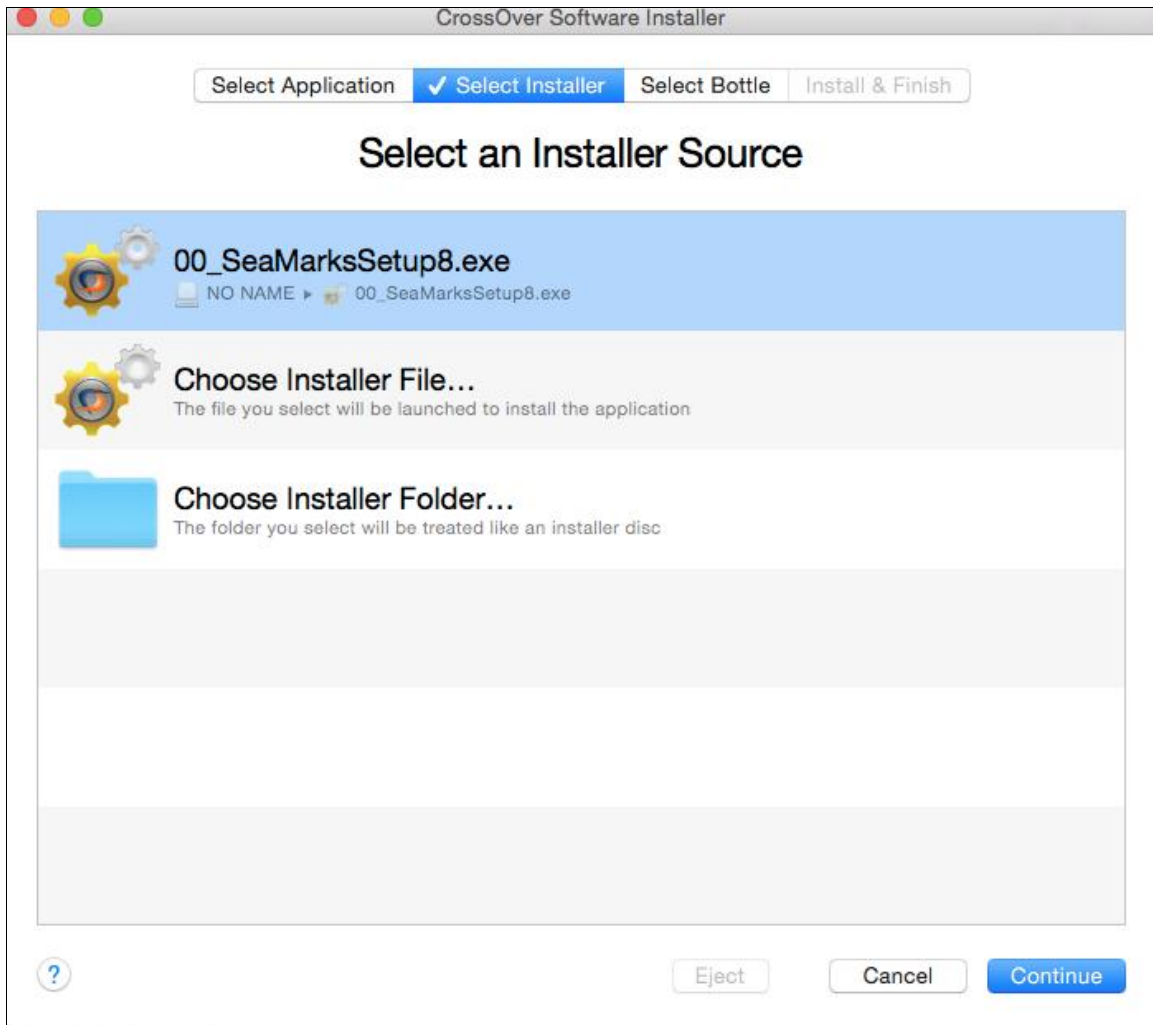

Press the select Application to Install. Go to the CD/USB device and pick 00_SeaMarksSetup8.exe.

Push Proceed.

Select "Choose Install file" and in the left column under "Devices" pick the CD or USB drive where the program is.

Click 00_SeaMarksSetup8.exe and push 'Use This Installer'.

To make sure the Bottle is the same one you put the VB6 Runtime Library in. Push Select Bottle. Of course select the SeaMarks bottle.

✓ Select Application ✓ Select Installer ✓ Select Bottle Install & Finish

Select a Bottle to Install Into

Compatible Bottles

New Windows 98 Bottle...
New Windows 2000 Bottle...
New Windows XP Bottle...
New Windows Vista Bottle...
New Windows 7 Bottle...
New Windows 8 Bottle...
SeaMarks

It is recommended that you install this application into a new bottle in order to avoid possible interference between programs.

New Bottle Name:

00_SeaMarksSetup8.exe

Installation notes:

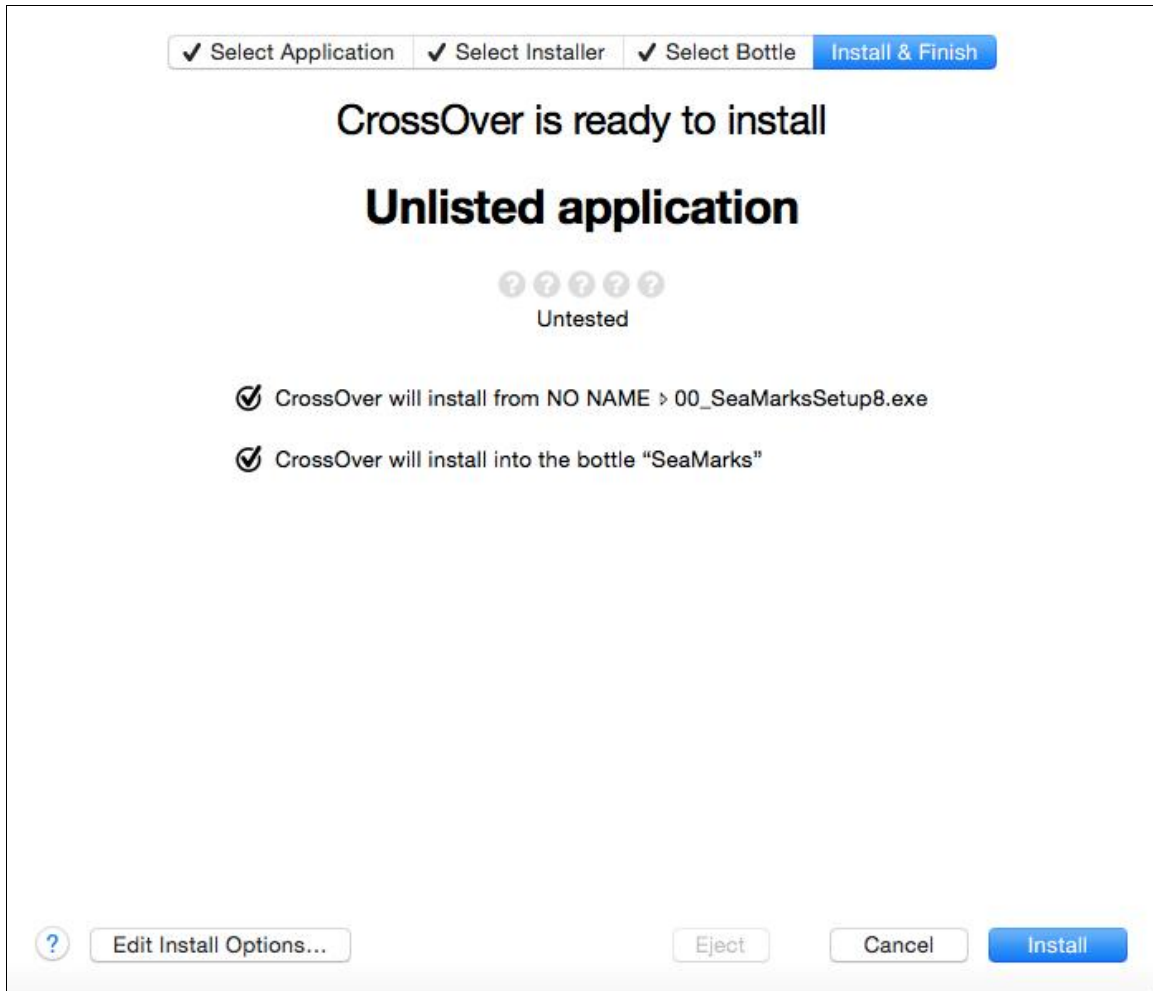

To install unknown software, CrossOver runs the same installer that would be used on Windows. For many CD-ROM installers you can simply select the disk location and CrossOver will locate a proper installer.

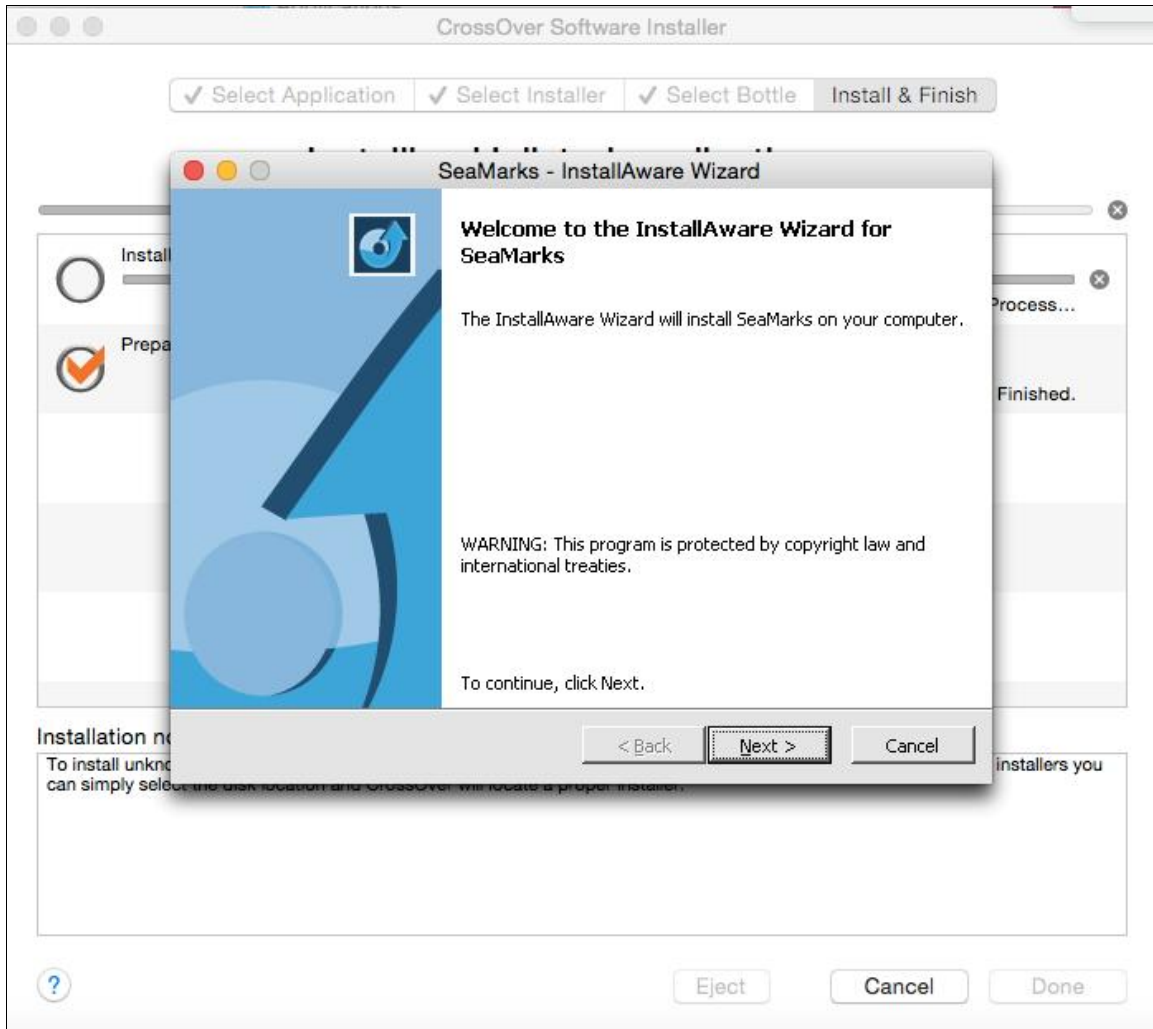

Eject

Cancel

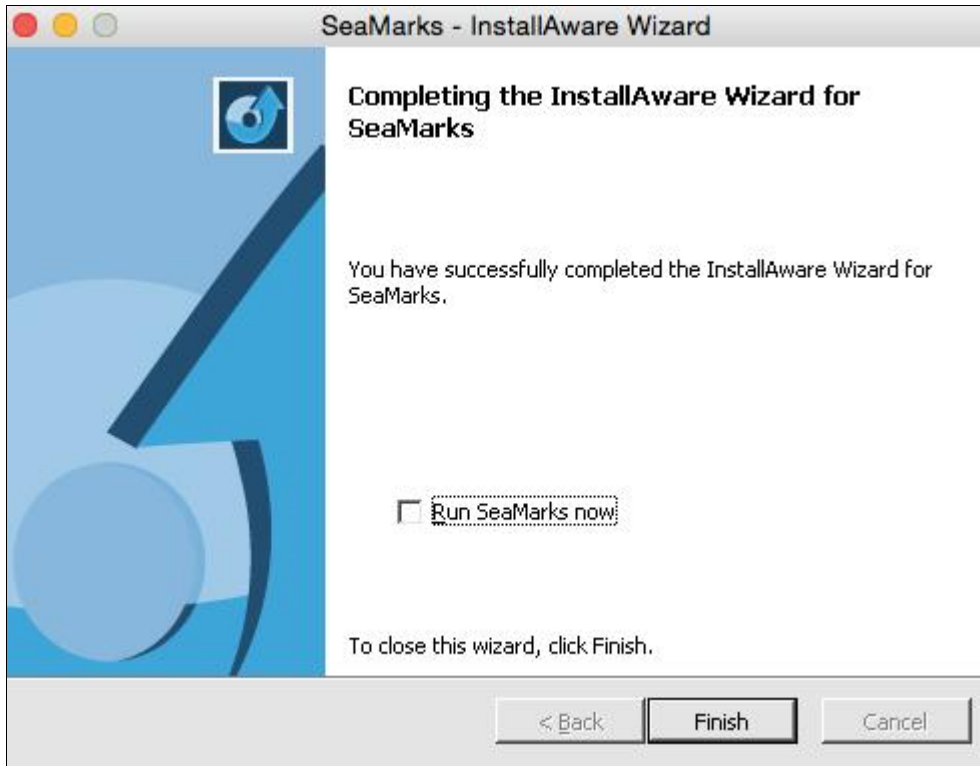

Continue

Then push Install

It should then begin the Windows install, so follow the instructions for that. I recommend that you accept all default choices.

Be patient, wait until it says 'done'. It can start running the program and allow you to personalize it while it is still installing but you will find it faster to de-select the 'Run SeaMarks Now' check box. Don't push 'cancel' On the Crossover window unless it is hung up for 10 minutes or more. Quitting the SeaMarks program will speed up the final install. If some of the icons are missing, they will probably show up on the next reboot of Crossover.

Once you have installed SeaMarks, and personalized it, it will load the NOAA charts from the CD or USB. When you first run Seamarks, it will bring up a Test file of bogus waypoints for you to play with. Note that if you display on a NOAA chart, it will hide the spreadsheet window if both are full screen.

See the SeaMarks manual for things to try to familiarize yourself with this application. It also advises you as to the first steps to start your own files.

To find files in the virtual C drive, use Bottle>Open C: Drive
